PROTOTYPE PRESENTATION RECORD

Directions

Document the details of the prototype presentation.

Project Title:

AGRI-AKAP: Agricultural Assistance and Knowledge Access Portal for Managing Farmers' Subsidies and Support Programs in the Municipal Agriculture Office

Date: September 8, 2026

Venue: Research Center

Duration: 8:30am – 9:45am

FORM 3
STAKEHOLDER EVALUATION FORM

Directions for Evaluators

Please evaluate the prototype using the scale below.

Rating	Description
5	Excellent
4	Very Good
3	Good
2	Fair
1	Needs Improvement

Evaluation Criteria

Criteria	Rating
System Functionality	4
User Interface Design	4
Ease of Use	5
System Responsiveness	4
Completeness of Features	5
Relevance to Organizational Needs	5

Strengths of the System

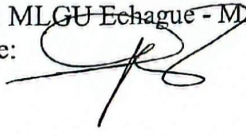

- The offline-first mobile application effectively handles transactions in dead spots without losing data.
- QR code scanning significantly speeds up the verification process for subsidy claiming.
- The system accurately maps out the municipal workflows required by the MAO.

Recommendations for Improvement

- Separate the single Name field into Last Name, First Name, and Middle Name across all registries (Farmers, Land Owners, Rotational Tillers).
- Add a ticket queueing system for physical cash or input distributions.
- Enhance the analytics dashboard to include sex-disaggregated data for PWDs, average waiting times, and peak disbursement days.
- Refine crop data logic by removing "Heads/Trees" for non-HVC crops and adding conditional dropdowns for specific high-value crops.
- Improve UI sizing and contrast, generate random temporary passwords for security, and hardcode "Data printed by AGRI-AKAP System" on all printable outputs.

Evaluator Name: Dawn Louella C. Panaligan

Position: MLGU Echague - MAO Representative

FORM 4
FEEDBACK CONSOLIDATION MATRIX

Recommendation	Category	Priority	Proposed Action
Separate Name fields (Last, First, Middle) and add Civil Status, Association, Main/Other Livelihood.	Functionality/UI	Medium	Update database schema to split names; append missing socio-economic fields to the encoding form.
Group Tenorial Status with Proof of Ownership and save custom entries; implement conditional "Other" text fields.	Functionality/UI	Medium	Rearrange UI layout for logical flow; add dynamic visibility for text inputs when "Other" is selected
Modify crop inputs to remove "Heads/Trees" for Rice/Corn and add conditional High-Value Crop selections.	Functionality	Medium	Apply conditional rendering logic to hide irrelevant metrics based on the primary crop selected.
Update Dashboard: PWD Male/Female breakdown, waiting times, peak disbursement days, and ticket queueing.	Functionality	High	Rewrite controller queries for new metrics, update dashboard charts, and build a queue number generator.
Resize text boxes, improve UI contrast, implement random temp passwords, and add footer to printed reports.	UI/Security	Medium	Refactor CSS for accessibility, update authentication logic for new users, and apply print media queries.

Directions

Record all recommendations and corresponding actions.

Summary of Findings

Major Strengths: The core logic for offline synchronization and RSBSA data management is highly robust and operational.

Major Areas for Improvement: The front-end forms require stricter data validation and better layout organization, and the dashboard needs deeper, more specific analytics (like queueing and sex-disaggregation) to fully support MAO operations.

FORM 5
MINUTES OF MEETING

Project Title: AGRI-AKAP: Agricultural Assistance and Knowledge Access Portal for Managing Farmers' Subsidies and Support Programs in the Municipal Agriculture Office

Date: September 2, 2026

Venue: Research Center

Participants: Researchers, Panel Members, Project Adviser, and Agency Representative

Agenda

Prototype Presentation and Evaluation

Discussion Highlights

- The team successfully demonstrated the Alpha version, focusing on the offline capabilities and the QR subsidy dispensation process.
- The technical panel commended the system's architecture but heavily scrutinized the data entry forms for lacking specificity.
- The content panel emphasized the need for sex-disaggregated data and better queue management for ground operations.

Stakeholder Recommendations

- Update the farmer registry and crop data forms to be more granular and dynamic.
- Expand the Command Center dashboard to display distribution logistics and demographics.
- Tighten visual accessibility and initial account security.

Agreed Action Items

Agreed Action Items

Action Item	Responsible Person	Target Date
1. Standardize all name fields and add socio-economic profile inputs.	Dave Raphael M. Ignacio	Sep 14, 2026
2. Implement dynamic conditional logic for crops, tenurial status, and "Other" fields	Justin R. Iddurut	Sep 14, 2026
3. Refactor UI sizing, contrast, add print footers, and update password security.pdate dashboard analytics.	John Mitchel M. Dupitas	Sep 14, 2026

FORM 6
SYSTEM ENHANCEMENT PLAN

Directions

Develop an action plan based on stakeholder recommendations.

Enhancement Required	Priority	Assigned Member	Target Completion
Split names, add Civil Status/Association/Livelihood, group Tenorial Status.	High	Justin R. Iddurut	Sep 12, 2026
Remove Heads/Trees for Rice/Corn, add conditional HVC options, and dynamic "Other" text fields.	Medium	John Mitchel M. Dupitas	Sep 13, 2026
Add sex-disaggregated PWD data, wait times, peak days, and a ticket queue generator.	High	Dave Raphael M. Ignacio	Sep 15, 2026
